

CAUTIONARY LANGUAGE AND FORWARD-LOOKING STATEMENTS

All Mineral Reserve and Mineral Resources estimates reported by the Company were estimated in accordance with the Canadian National Instrument 43-101 and the Canadian Institute of Mining, Metallurgy, and Petroleum Definition Standards (May 10, 2014). These standards differ significantly from the requirements of the U.S. Securities and Exchange Commission. Mineral Resources which are not Mineral Reserves do not have demonstrated economic viability.

This document contains "forward-looking information" within the meaning of Canadian securities legislation and "forward-looking statements" within the meaning of the United States Private Securities Litigation Reform Act of 1995. This information and these statements, referred to herein as "forward-looking statements" are made as of the date of this document. Forward-looking statements relate to future events or future performance and reflect current estimates, predictions, expectations or beliefs regarding future events and include, but are not limited to, statements with respect to:

- (i) the estimated amount and grade of Mineral Resources and Mineral Reserves;
- (ii) the PFS representing a viable development option for the Project;
- (iii) estimates of the capital costs of constructing mine facilities and bringing a mine into production, of sustaining capital and the duration of financing payback periods;
- (iv) the estimated amount of future production, both produced and sold; and,
- (v) estimates of operating costs and total costs, net cash flow, net present value and economic returns from an operating mine.

Any statements that express or involve discussions with respect to predictions, expectations, beliefs, plans, projections, objectives or future events or performance (often, but not always, using words or phrases such as "expects", "anticipates", "plans", "projects", "estimates", "envisages", "assumes", "intends", "strategy", "goals", "objectives" or variations thereof or stating that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved, or the negative of any of these terms and similar expressions) are not statements of historical fact and may be forward-looking statements.

All forward-looking statements are based on Verde's or its consultants' current beliefs as well as various assumptions made by them and information currently available to them. The most significant assumptions are set forth above, but generally these assumptions include:

- (i) the presence of and continuity of resources and reserves at the Project at estimated grades;
- (ii) the geotechnical and metallurgical characteristics of rock conforming to sampled results; including the quantities of water and the quality of the water that must be diverted or treated during mining operations;

- (iii) the capacities and durability of various machinery and equipment;
- (iv) the availability of personnel, machinery and equipment at estimated prices and within the estimated delivery times;
- (v) currency exchange rates;
- (vi) Super Greensand® and K Forte® sales prices, market size and exchange rate assumed;
- (vii) appropriate discount rates applied to the cash flows in the economic analysis;
- (viii) tax rates and royalty rates applicable to the proposed mining operation;
- (ix) the availability of acceptable financing under assumed structure and costs;
- (x) anticipated mining losses and dilution;
- (xi) reasonable contingency requirements;
- (xii) success in realizing proposed operations;
- (xiii) receipt of permits and other regulatory approvals on acceptable terms; and
- (xiv) the fulfilment of environmental assessment commitments and arrangements with local communities.

Although management considers these assumptions to be reasonable based on information currently available to it, they may prove to be incorrect. Many forward-looking statements are made assuming the correctness of other forward looking statements, such as statements of net present value and internal rates of return, which are based on most of the other forward-looking statements and assumptions herein. The cost information is also prepared using current values, but the time for incurring the costs will be in the future and it is assumed costs will remain stable over the relevant period.

By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific, and risks exist that estimates, forecasts, projections and other forward-looking statements will not be achieved or that assumptions do not reflect future experience. We caution readers not to place undue reliance on these forward-looking statements as a number of important factors could cause the actual outcomes to differ materially from the beliefs, plans, objectives, expectations, anticipations, estimates assumptions and intentions expressed in such forward-looking statements. These risk factors may be generally stated as the risk that the assumptions and estimates expressed above do not occur as forecast, but specifically include, without limitation: risks relating to variations in the mineral content within the material identified as Mineral Resources and Mineral Reserves from that predicted; variations in rates of recovery and extraction; the geotechnical characteristics of the rock mined or through which infrastructure is built differing from that predicted, the quantity of water that will need to be diverted or treated during mining operations being different from what is expected to be encountered during mining operations or post closure, or the rate of flow of the water being different; developments in world metals markets; risks relating to fluctuations in the Brazilian Real relative to the Canadian dollar; increases in the estimated capital and operating costs or unanticipated costs; difficulties attracting the necessary work force; increases in financing

costs or adverse changes to the terms of available financing, if any; tax rates or royalties being greater than assumed; changes in development or mining plans due to changes in logistical, technical or other factors; changes in project parameters as plans continue to be refined; risks relating to receipt of regulatory approvals; delays in stakeholder negotiations; changes in regulations applying to the development, operation, and closure of mining operations from what currently exists; the effects of competition in the markets in which Verde operates; operational and infrastructure risks and the additional risks described in Verde's Annual Information Form filed with SEDAR in Canada (available at www.sedar.com) for the year ended December 31, 2020. Verde cautions that the foregoing list of factors that may affect future results is not exhaustive.

When relying on our forward-looking statements to make decisions with respect to Verde, investors and others should carefully consider the foregoing factors and other uncertainties and potential events. Verde does not undertake to update any forward-looking statement, whether written or oral, that may be made from time to time by Verde or on our behalf, except as required by law.

RISK FACTORS

The Board regularly reviews the risks to which the Company is exposed and ensures through Board Committees and regular reporting that these risks are minimized to the extent possible. The Audit Committee is responsible for the implementation and review of the Company's internal financial controls and risk management systems.

The extraction of natural resources involves a high degree of risk. The following risk factors should be considered in assessing the Company's activities. Should any one or more of these risks occur, it could have a material adverse effect on the business, prospects, assets, financial position or operating results of the Company. The risks noted below do not necessarily comprise all those faced by the Company.

Additional risks not currently known to the Company or that the Company currently deems would not likely influence an investor's decision to purchase securities of the Company may also impact the Company's business, prospects, assets, financial position or operating results.

Covid-19 (Coronavirus) risk

Covid-19 (Coronavirus) remains an ongoing risk for all businesses worldwide. It is not clear for how long the pandemic will last or how much more extensive it will become, or the further measures that will be taken by governments and others to seek to control the pandemic and its impact.

At the date of signing this report, the globe is already showing signs of recovery following the development of multiple vaccines.

The Company's trade agriculture continues to fall under the food chain category and as such, the Brazilian government has confirmed there is no restriction on trade. During 2020 the plant remained open and was in full operation. Office staff worked from home.

Management has considered the risk to the supply chain and consider this low due to the simplicity of the operations. The Company can manage the on-site risk at the production facility if the employees were to get ill and have contingency plans in place. Management and the directors have stress tested the cashflow forecast for a worse case scenario if the operations shut down for six months and have demonstrated they would have necessary funds. Management and the directors consider this scenario to be a remote risk.

Uncertainty in the estimation of mineral resources and mineral reserves

The estimation of mineral reserves, mineral resources and related grades has a degree of uncertainty. Until such time as the mineral reserves and mineral resources are actually mined and processed, the quantity of grades must be considered as estimates only. The mineral reserve estimates of the Company have been determined or reviewed by an independent consultant and are based on assumed cut-off grades and costs that may prove to be inaccurate. Any material change in these variables may affect the economic outcome of current and future projects.

Mining risks

Mining operations are inherently risky. These operations are subject to all hazards and risks encountered in exploration, development and production. These include but are not limited to formation pressures, seismic activity, rock bursts, fires, power outages, cave-ins, flooding, explosions and other conditions involved in the drilling and removal of material. Any of these events could result in serious damage to the mine and other infrastructure, damage to life or property, environmental damage and possible legal liability.

The Company has all necessary permits in place to continue with the current operation. As expansion plans progress, the Company will be required to submit revised plans for approval. There can be no guarantee that these revised plans will be agreed to or approved in a timely manner.

The Company's profitability will depend, in part, on the economic returns and actual costs of developing its mining projects, which may differ from the estimates made by the Company.

Credit risk

The Company is exposed to credit risk, which is the risk that one party of a financial instrument will cause a financial loss for the other party by failing to discharge an obligation. Exposure to credit risk arises primarily from trade receivables.

The Company has developed procedures to ensure that the sale of goods is made only to customers with an appropriate credit history. Customers who do not meet the Company's credit requirements may only conduct transactions with the Company on a prepayment basis.

Production risk

Production risk relates to the possibility that the Company output levels will be lower than expected. Factors affecting production include adverse weather conditions and failure of equipment and machinery. Mining of the Product continues throughout the year with maximum capacity (within permitted mining limits) during the summer, dry months of the year. Regular inspection and service of equipment and machinery is carried out to ensure they are in full working order.

Expected Market Potential of the Product

The Product is a new product without an established market. Substantial investment may be required to develop the market in Brazil and, if relevant, internationally. Although an established market for potassium-based fertilizers already exists, there is no assurance that the Company's market development efforts will result in the sales of the Product.

Uncertainty of Acquiring Necessary Permits

The Company's current and future operations will require approvals and permits from various federal, state and local governmental authorities, and such operations are and will be governed by laws and regulations governing prospecting, development, mining, production, taxes, labour standards, health, waste disposal, toxic substances, land use, environmental protection, mine safety and other matters. There is no assurance that delays will not occur in connection with obtaining all necessary renewals of such approvals and permits for the existing operations or additional approvals or permits for any possible future changes to operations. Prior to any development on any of its properties, the Company must receive permits from appropriate governmental authorities. There can be no assurance that the Company will continue to hold all permits necessary to develop or continue operating at any particular property or obtain all the required permits on reasonable terms or in a timely basis. The Company has been successful in obtaining environmental and mining licences for small scale production and continues to apply for the appropriate licences to meet future production in line with its expansion plans.

Uninsurable Risks

The development and production of mineral properties involves numerous risks including unexpected or unusual geological operating conditions such as rock bursts, cave-ins, fires, flooding and earthquakes. Insurance may not be available to cover all of these risks, may only be available at economically unacceptable premiums or may be inadequate to cover any resulting liability. Any uninsured liabilities that arise would have a material adverse effect on the Company's business and results of operations.

Operations in a Foreign Country and Regulatory Requirements

All the Company's properties are located in Brazil and mineral exploration and mining activities as well as project development may be affected in varying degrees by changes in political, social and financial stability, inflation and changes in government regulations relating to the mining industry. Any changes in regulations or shifts in political, social or financial conditions are beyond the control of the Company and may adversely affect its business. Operations may be affected in varying degrees by government regulations with respect to restrictions on production, price controls, export controls, income taxes, expropriation of property, environmental legislation and mine safety. Brazil's status as a developing country may make it more difficult for the Company to obtain any financing required for the exploration and development of its properties due to real or perceived increased investment risk.

Currently there are no restrictions on the repatriation from Brazil on the earnings of foreign entities. Capital investments registered with the central bank in Brazil may similarly be repatriated. There can be no assurance that restrictions on repatriation of earnings and capital investments from Brazil will not be imposed in the future.

Competition

The Company competes with other mining companies as well as other companies producing agricultural products, many of which have greater financial and technical resources and experience, particularly with respect to the potash industry and the limited number of mineral opportunities available in South America. Competition in the mining industry is primarily for properties which can be developed and can produce economically; the technical expertise to find, develop, and operate such properties; the labour to operate the properties; and the capital for the purpose of funding such properties. In addition, many competitors not only explore for and mine potash, but conduct refining and marketing operations on a world-wide basis. Such competition may result in the Company being unable to acquire desired properties on terms acceptable to the Company, to recruit or retain qualified employees or to acquire the capital necessary to fund its operations and develop its properties. The Company's inability to compete with other mining companies for these resources would have a material adverse effect on the Company's business and results of operations.

The Company also competes with other potash mining and/or marketing companies, many of which have greater marketing, financial and technical resources and experience, in exporting and marketing its potash or potassium-based products. The Company is vulnerable to increases in the supply of potash beyond market demand either from the opening of new potash mines or the expansion of existing potash mines by the Company's competitors, which could depress prices and have a material adverse effect on the Company's business, financial condition and results of operation.

Title Matters

While the Company has diligently investigated title to all mineral properties and, to the best of its knowledge, title to all properties is in good standing; this should not be construed as a guarantee of title. The properties may be affected by undetected defects in title, such as the reduction in size of the mineral claims and other third party claims affecting the Company's priority rights, at the discretion of the ANM. The Company's interests in mineral properties are comprised of exclusive rights under government licences and contracts to conduct operations in the nature of exploration and, in due course if warranted, development and mining, on the licence areas. Maintenance of such rights is subject to ongoing compliance with the terms of such licences and contracts.

Uncertainty of Additional Capital

In the past, the Company has relied on sales of equity securities to meet its capital requirements. The Company plans to use predominately production revenue to cover costs going forward with a small amount of bank financing. There is no assurance that the Company will be successful in obtaining the required financing.

The ability of the Company to arrange additional financing in the future will depend, in part, on the prevailing capital market conditions as well as the business performance of the Company. The development of the Company's projects may require substantial additional financing. Failure to obtain such financing may result in delaying or indefinite postponement of exploration, development or production on any or all of the Company's projects or even a loss of property interest. There can be no assurance that additional capital or other types of financing will be available if needed or that, if available, the terms of such financing will be favourable to the Company. If the Company, through the issuance of securities from treasury, raises additional financing, control of the Company may change and security holders may suffer additional dilution. See "Risk Factors – Dilution".

Government Royalties

The Federal Government of Brazil collects royalties on mineral production, with up to half of such royalties being paid to surface rights owners. The current Brazilian federal royalty applicable to fertilizer production is a 2% net smelter return ("NSR") and a 3% NSR in the case of potash. This level and the level of any other royalties, payable to the Brazilian government in respect of the production of minerals may be varied at any time as a result of changing legislation, which could materially adversely affect the Company's results of operations.

Market Factors and Volatility of Commodity Prices

The Company's future profitability and long-term viability will depend, in large part, on the global market price of minerals produced and their marketability. The marketability of mineralized material, which may be acquired or discovered by the Company, will be affected by numerous factors beyond the control of the Company. These factors include market fluctuations in the prices of minerals sought, which are highly volatile, inflation, consumption patterns, speculative activities, international political and economic trends, currency exchange fluctuations, interest rates, production costs and rates of production. The effect of these factors cannot be accurately predicted, but may result in the Company not receiving an adequate return on invested capital. Prices of certain minerals have fluctuated widely, particularly in recent years, and are affected by numerous factors beyond the control of the Company. Future mineral prices cannot be accurately predicted. A severe decline in the price of a mineral being produced or expected to be produced by the Company would have a material adverse effect on the Company, and could result in the suspension of mining operations by the Company.

Cyclical Industry

The market for potash tends to move in cycles. Periods of high demand, increasing profits and high capacity utilization lead to new plant investment and increased production. This growth increases supply until the market is over-saturated, leading to declining prices and declining capacity utilization until the cycle repeats. This cyclicity in prices can result in supply/demand imbalances and pressures on potash prices and profit margins, which may impact the Company's financial results, and common share prices. The potash industry is dependent on conditions in the economy generally and the agriculture sector. The agricultural sector can be affected by adverse weather conditions, cost of inputs, commodity prices, animal diseases, the availability of government support programs and other uncertainties that may affect sales of fertilizer products.

Exchange Rate Fluctuations

Exchange rate fluctuations may adversely affect the Company's financial position and results. The Company's financial results are reported in Canadian dollars and its costs are incurred primarily in Canadian dollars and Brazilian Reals. The appreciation of the Brazilian real against the Canadian dollar could increase the actual capital and operating costs of the Company's mineral exploration projects and materially adversely affects the results presented in the Company's financial statements. Currency exchange fluctuations may also materially adversely affect the Company's future cash flow from operations, its results of operations, financial condition and prospects. The Company does not currently have in place a policy for hedging against foreign currency risks. The Company manages foreign currency risk by regularly reviewing the balances held in currencies other than the functional currency.

Dependence on Key Executives and Technical Personnel

The Company is currently dependent on the services of a relatively small management team. Locating mineral deposits and successfully bringing them into production in Brazil depends on a number of factors, not the least of which is the technical skill of the personnel involved. Due to the relatively small size of the Company, the loss of members of the management team or the Company's inability to attract and retain additional highly skilled employees may materially adversely affect its business and future operations. The Company does not currently carry any "key man" life insurance on any of its executives. The non-executive directors of the Company devote only part of their time to the affairs of the Company.

Lack of Hedging Policy

The Company does not have a resource hedging policy and has no present intention to establish one. Accordingly, the Company has no protection from declines in mineral prices. The Company will explore the merits of hedging foreign currency reserves against foreign currency exchange rate fluctuations.

History of Earnings

The Company generated operating revenue of C\$9,167,000 and achieved an operating profit of C\$1,126,000 for the year ended 31 December 2020. Management anticipates that the Company will generate net profits going forward. However, there is no assurance the Company will generate sufficient earnings, operate profitably, or provide a return on investment in the future.

Dilution

The Company currently has 50,364,858 Ordinary Shares outstanding and 54,214,430 on a fully diluted basis. The Company currently has no warrants outstanding. To the extent the Company should, in future, issue any additional warrants, additional options, convertible securities or other similar rights, the holders of such securities will have the opportunity to profit from a rise in the market price of the Ordinary Shares with a resulting dilution in the equity interest of any persons who become holders of Ordinary Shares. The Company's ability to obtain additional financing during the period such rights are outstanding may be adversely affected and the existence of the rights may have an adverse effect on the price of the Ordinary Shares. The holders of warrants, options and other rights may exercise such securities at a time when the Company would, in all likelihood, be able to obtain any needed capital by a new offering of securities on terms more favourable than those provided by the outstanding rights.

In some circumstances, the increase in the number of Ordinary Shares issued and outstanding and the possibility of sales of such shares may have a depressive effect on the price of the Ordinary Shares. In addition, as a result of such additional Ordinary Shares, the voting power of the Company's existing shareholders may be diluted.

Officers and Directors of the Company Own a Significant Number of Ordinary Shares and Can Exercise Significant Influence

The officers and directors of the Company, as a Company, beneficially own, on a non-diluted basis, approximately 21.33% of the outstanding Ordinary Shares. The officers and directors, as shareholders, will be able to exert significant influence on matters requiring approval by shareholders, including the election of directors and the approval of any significant corporate transactions.

Future Sales of Ordinary Shares by Existing Shareholders

Sales of a large number of Ordinary Shares in the public markets, or the potential for such sales, could decrease the trading price of the Ordinary Shares and could impair the Company's ability to raise capital through future sales of Ordinary Shares.

Conflicts of Interest

Directors of the Company are or may become directors of other reporting companies or have significant shareholdings in other mining companies and, to the extent that such other companies may participate in ventures in which the Company may participate, the directors of the Company may have a conflict of interest in negotiating and concluding terms respecting the extent of such participation. The Company and its directors attempt to minimize such conflicts. In the event that such a conflict of interest arises at a meeting of the directors of the Company, a director who has such a conflict will abstain from voting for or against the approval of such participation or such terms. In appropriate cases the Company will establish a special committee of independent directors to review a matter in which several directors, or management, may have a conflict. The directors of the Company are required to act honestly, in good faith and in the best interests of the Company. In determining whether or not the Company will participate in a particular program and the interest therein to be acquired by it, the directors will primarily consider the potential benefits to the Company, the degree of risk to which the Company may be exposed and its financial position at that time.

The Cerrado Verde Project is Managed by a Subsidiary

The material operating subsidiary for the Cerrado Verde Project is Verde Fertilizantes. The managers ("administradores") of Verde Fertilizantes are Felipe Paolucci, CFO, and Elton Golçaves, Mining Engineer. Despite the controls that the Company has put in place, there may be risks associated with ensuring that the corporate actions of Verde Fertilizantes reflect the decisions of the Board of Directors and management of the Company.
