Recent Events

Verde AgriTech is delighted to have participated in Brazil's largest forest event on Sept 9-11 in Brasília. It's a great to share knowledge on nutrient management, forest handling and cultivation; explore innovations; and hear how our silviculture technologies are being implemented in Brazil. *See you next year!*

On Aug 28–29, Verde AgriTech attended FLORESTAR 2025 in Sinop (MT), the traditional technical meeting promoted by AREFLORESTA focused on supporting the planted forest sector in Mato Grosso. It was a day of learning alongside experienced consultants, researchers and forestry professionals, and concluded with visits to eucalyptus nurseries. We reaffirm our commitment to delivering quality nutrition for forests through Verde AgriTech's know-how and technologies.

Our Valued Partners

Using K Forte® in grower Ronaldo Morini's orchard led to healthier, more uniform trees with deeper green foliage and vibrant leaf shine. Similar benefits were also seen in other crops, like mango and brachiaria cover plants, showing stronger vitality and color.

Brazil economists trim end-2026 interest rate forecast after seven months

Reuters | September 15, 2025

BRASILIA (Reuters) -Brazilian economists cut their outlook for interest rates at the end of 2026 after more than seven months of steady forecasts, a weekly central bank survey showed on Monday, days before the next policy decision.

The median estimate from more than 100 respondents now puts the benchmark Selic rate at 12.38% at the end of next year, down from 12.50% previously, a projection that had not shifted for 32 weeks.

Brazil's demand for fertilizer to rise, govt official says

Reuters | September 2, 2025

Brazilian farmers' demand for fertilizers will rise to 58.5 million tons per year by 20230 and will reach 73.1 million tons per year by 2036, Jose Polidoro, an official at Brazil's agriculture minister, said on Tuesday.

US adds copper, potash, silicon in critical minerals list shake-up

Mining.com | August 25, 2025

The US government has added copper, potash and silicon to its draft list of critical minerals, in the most significant overhaul since the it was first published in 2018.
